

NAME

psprint – print various types of files to a PostScript printer

SYNOPSIS

psprint *file* ...

DESCRIPTION

The **psprint** script invokes various helper programs, including **groff**, **gs**, **enscript**, **gzcat**, **zcat**, and **lpr** to format various types of files and print them to a PostScript printer.

FILETYPES

The following types of files are supported:

***.c *.h *.cpp *.hpp *.C *.H *.cc *.cxx *.hxx *.c++ *.h++ *.m *.i *.ii *.s *.S**

C, C++, Objective-C, and Assembler source files.

***.pdf**

PDF documents.

***.pdf.gz**

Gzipped PDF documents.

***.pdf.Z**

Compressed PDF documents.

***.ps *.eps**

PostScript files.

***.ps.gz *.eps.gz**

Gzipped PostScript files.

***.ps.Z *.eps.Z**

Compressed PostScript files.

***.java**

Java source files.

***.[1-9]* *.man**

Manpages.

***.pl *.py *.sh *.csh *.shrc**

Perl, Python, and shell scripts.

***.txt *.log *.html *.xml**

Text files, log files, HTML and XML documents.

GNUmakefile [Mm]akefile *.mak *.mk [Cc]onfigure *.m4 *.in *.ac

Makefiles, Configure scripts, and autoconf/automake files.

All other documents which appear to be ASCII text files are also supported.
